Abstract of FR2793048

The invention relates to a method for controlling commands in several application files, whereby an access condition corresponding to said command is associated with each command in each application file, each command in each application file is executed if a user orders the execution thereof and if the access condition corresponding to said command is stored. According to the invention, the access conditions are stored jointly for all application files.

10. THE USER ORDERED THE EXECUTION OF A COMMAND IN AN APPLICATION FILE
 81. SEARCH IF THE ACCESS CONDITION CORRESPONDING TO SAID COMMAND IS STORED
 82. EXECUTION OF THE COMMAND IS LAUNCHED IF THE ACCESS CONDITION IS STORED
 83. THE USER IS REQUESTED TO MEET THE ACCESS CONDITION IF THE ACCESS CONDITION IS NOT STORED
 84. THE ACCESS CONDITION IS STORED AND THE EXECUTION OF THE COMMAND IS LAUNCHED IF THE USER MEETS THE ACCESS CONDITION
